Describe the internship assignment:

Farm Fuel Inc is a small company based in Watsonville working towards solving global problems with sustainable solutions on farms and gardens. We research alternatives to chemical fumigation, pesticide, herbicide, and fungicide use. Interns will assist with collecting field data, entering the data and keeping it organized, weighing fruit loads from test strawberry plots, writing literature reviews, tabling with our company at local educational events (Earth day, garden fairs, etc), learning how a small office runs, and learning all about an organic agricultural research company works.

Students interested in learning about environmental policy, agroecology, agriculture, and environmental education should apply to have an internship.

Prerequisites:

- Students with a background in statistics, biology, plant pathology, environmental ecology, agroecology and related subjects are welcome.
- Students must be prompt, organized, able to take directions, have an interest in agriculture, and
- must own a car to drive to field sites around the central coast.
