worked per intern: Fall Winter Remove your listing by

1-2 5 credit interns Spring Summer Or keep on file for one year

internship assignment:

The San Francisco Bay Bird Observatory is dedicated to the conservation of birds and their habitats through science and outreach. We are located in Milpitas, approximately 45-60 minutes north of Santa Cruz. SFBBO's Coyote Creek Field Station bands birds throughout the year to study bird migration patterns and the bird community of one of the largest riparian habitats in the South Bay Area. We seek an intern (or two) to work with Landbird Program biologists to band birds, train and work with volunteers, and analyze and manage data.

Banding occurs on Wednesday, Saturday and Sunday mornings (45 minutes before sunrise) at the Field Station. Interns will be expected to work 1-2 days a week (flexible).

Desired Intern qualities: Hard work ethic, excellent attitude, responsible, commitment to the project of at least 1-2 years, previous bird banding experience (not required).

What you will get: Bird banding skills with extensive training, data management and analysis training, Bay Area ecology networking opportunities, access to 35 years of long term biological data for project development.

We are very interested in working with interns who are interested in developing their research further as a senior thesis or Masters thesis, though that is not required. Please submit a resume and cover letter if interested.
