

FERP

FOREST ECOLOGY RESEARCH PLOT

Spring 2019 Internships

Who loves the forest?

YOU loves the forest!

Contribute to a global-scale project tracking forest dynamics!
Learn forest ecology field methods, meet new people, and contribute to real science here on campus!

Shift times
TBD:
6 -hour shifts offered Mon-Fri; you would do one of these
pick one!

~to apply~

Our 2-unit internships require a sense of adventure and willingness and ability to work off-trail in sometimes challenging terrain. Poison oak is abundant, and though we provide coverall suits, gloves, and Technu, participation isn't recommended if you know you are highly sensitive to poison oak. Shifts are held in 6 hour shifts once per week. You must attend 9 of your 10 scheduled field shifts, with your remaining 6 hours dedicated to completing 3 FERP assignments that put your field work in context.

To apply, compose an email describing your interest, include your winter schedule, and send to Alex Krohn at: cnr@ucsc.edu
